

Test Automation Framework Design Principles

Thank you for coming to this webinar

1100+ Registered

Through multiple channels

360 Cities

Chennai, the highest and followed by Bengaluru

14 Countries

Mostly from India and followed by United States

4 Continents

Asia, United States, Australia and Europe

In last 3 weeks, we got more than 170 QA people lost their jobs (based on our data only in Chennai). May be worst yet to happen !

Out of which, 31 of them are sole earners in their family !!

Can we make an effort to help those job losers
to get back to work?

You can assist !!

Share the job opportunities you know in any medium

Do not switch job for next few months unless it is so needed, rather give it to someone else !!

Help them to upskill, motivate them in whatever form you can !!

About TestLeaf & Myself

TestLeaf founded in 2009 as ed tech company and now, we spread across markets through our training, consulting, staffing and products.

Team Size:
44

Training Services

TestLeaf specializes on personalized training services for corporates and public. Our deeply skilled mentors, creative course content and delivery model is so unique.

Staffing & Consulting Services

If you are looking for manual QA / test automation staff for a short period of time and immediate onboarding, our temporary staffing is the most flexible form of employment mediation.

Products

Tuna, the codeless test automation product that can automate your tests incredibly fast on web and mobile applications. Integration with CI and build tools is a big plus.

Babu

Coach & Mentor
20 years experience
60000+ Scripts
1 Million+ Tests

Let's Get Really Started

Test Automation Framework Design Principles

~ Build a House

Step 1) Identify the influencers

Influencers that you should know

Programming Language

Test Tool

Who is the user?

Project Length

Programming Language

Build test automation frameworks in the same language of development

Why?

In agile world, you can collaborate more with your developers. Shift Left

Programming Language

Test Tool

Who is the user?

Project Length

Programming Language

Build test automation frameworks in the same language of development

Front end or back end language?

Depends, on what you do !!

If you are testing UI, then front-end language and if you testing the API, then the backend.

Programming Language

Test Tool

Who is the user?

Project Length

Programming Language

| | | | |
|--|----------------|-----------------------------|-------------|
|  JS | Mocha | Selenium (Js) / WebDriverIO | |
| | Pytest | Se Base | Se (Python) |
| | RSpec | Watir | Se (Ruby) |
| | Junit / TestNG | Se (Java) | |

Json Wire Protocol / W3C

ChromeDriver

EdgeDriver

GeckoDriver

OperaDriver

SafariDriver

Question to ask yourself !!

Should I know ReactJs to automate ReactJs application?

Programming Language

Test Tool

Who is the user?

Project Length

Take Away 1

Preferably, design the framework in the same programming language as developers.

Programming Language

Test Tool

Who is the user?

Project Length

Framework design as abstract of the tool

Frameworks are Convenient abstractions designed to remove as much boilerplate as possible from tool test setup and execution.

Programming Language

Test Tool

Who is the user?

Project Length

Framework design as abstract of the tool

So you (test engineers) can focus primarily on test logic.

Programming Language

Test Tool

Who is the user?

Project Length

Which tool to use?

1

Need & Purpose

2

Tenure & Features

3

Commits & Support

4

Language & Platform

5

Power of Integration

Question to ask yourself !!

Should I not have one framework abstracting multiple tools?

Programming Language

Test Tool

Who is the user?

Project Length

Question to ask yourself !!

Should I not have one framework abstracting multiple tools?

S.O.L.I.D is an acronym for the **first five object-oriented design(OOD)** principles**** by Robert C. Martin

- **S** - Single - responsibility principle

Programming Language

Test Tool

Who is the user?

Project Length

Take Away 2

Design the framework as a convenient abstractions on top of the single tool.

Programming Language

Test Tool

Who is the user?

Project Length

Who is the consumer of framework?

Find the daily users of the framework
and that can change the perspective of
your design thinking.

Programming Language

Test Tool

Who is the user?

Project Length

Who is the consumer of framework?

Internal vs External

Reports : Simple vs Elegant

Browser : One vs Many (Versions / OS)

Data : Single vs Multiple Source

Perfect vs Working

Programming Language

Test Tool

Who is the user?

Project Length

Who is the consumer of framework?

Business vs Technical

Properties vs Classes

Excel vs JSON

Programming Language

Test Tool

Who is the user?

Project Length

Who is the consumer of framework?

If you are unsure, **do Discovery workshop** to know what is really needed to be built !!

Programming Language

Test Tool

Who is the user?

Project Length

Take Away 3

Build the framework for the consumer
(based on their feedback) and not
something you know or comfortable with.

Programming Language

Test Tool

Who is the user?

Project Length

Tenure vs Framework Features

The higher the tenure, the framework standard should be higher:

- features
- usability
- documentation

Programming Language

Test Tool

Who is the user?

Project Length

Tenure vs Framework Features

Start as Minimalist

Programming Language

Test Tool

Who is the user?

Project Length

Take Away 4

Build and expand the framework **as time progresses**. Do not build everything in Sprint Zero.

Programming Language

Test Tool

Who is the user?

Project Length

Influencers Summary

Remember that the influencers decides what, how and when design?

Programming Language ✓

Test Tool ✓

Who is the consumer? ✓

Project Length ✓

When you like to buy car, which one you would choose?

01

02

03

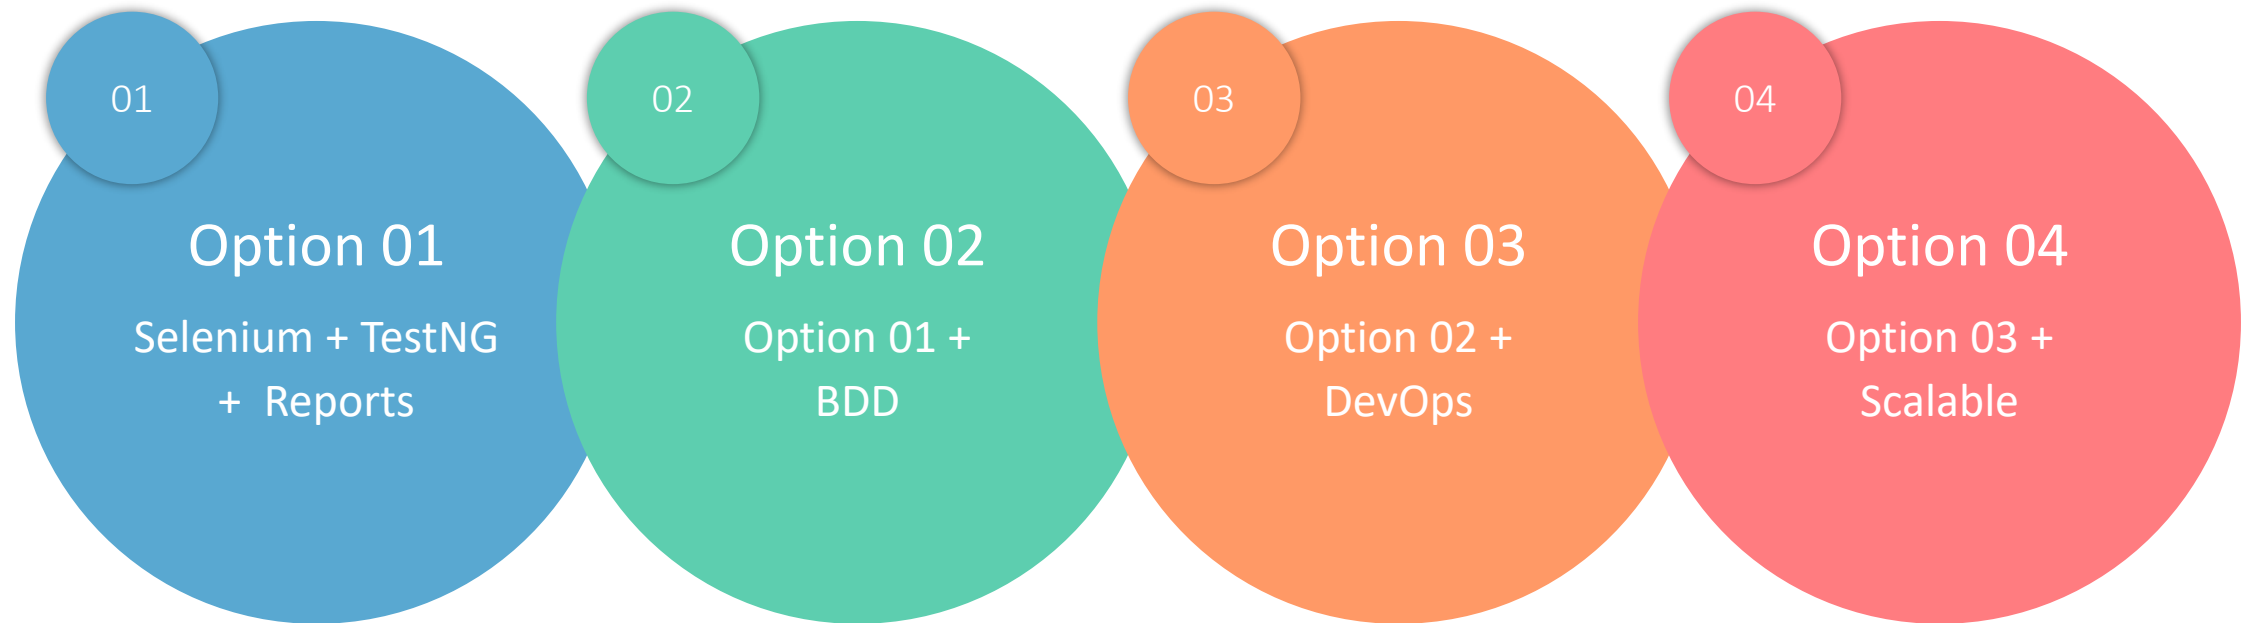

04

Take Away 5

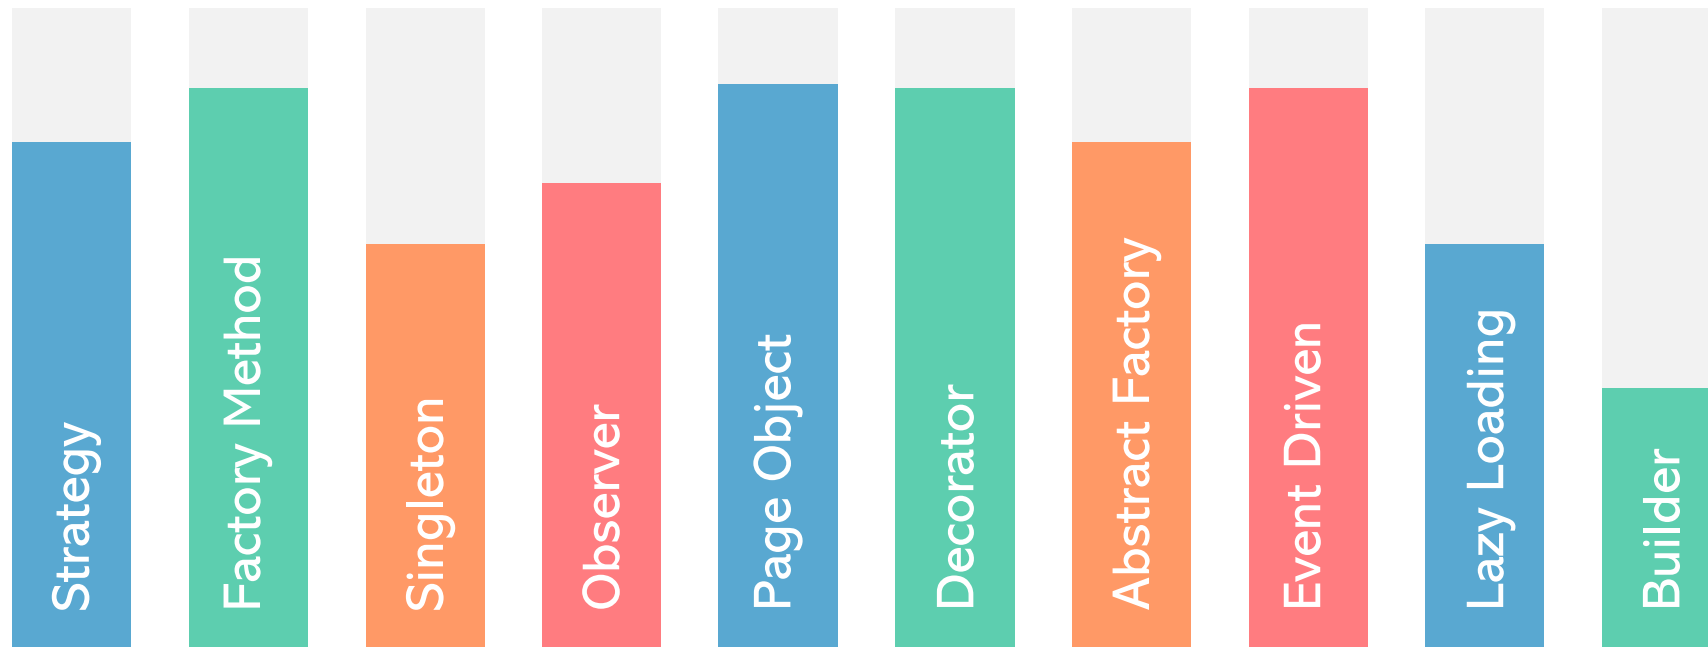

Design Multiple frameworks and Not One !!

Let the consumer choose and not you.

Step 2) Identify the design patterns

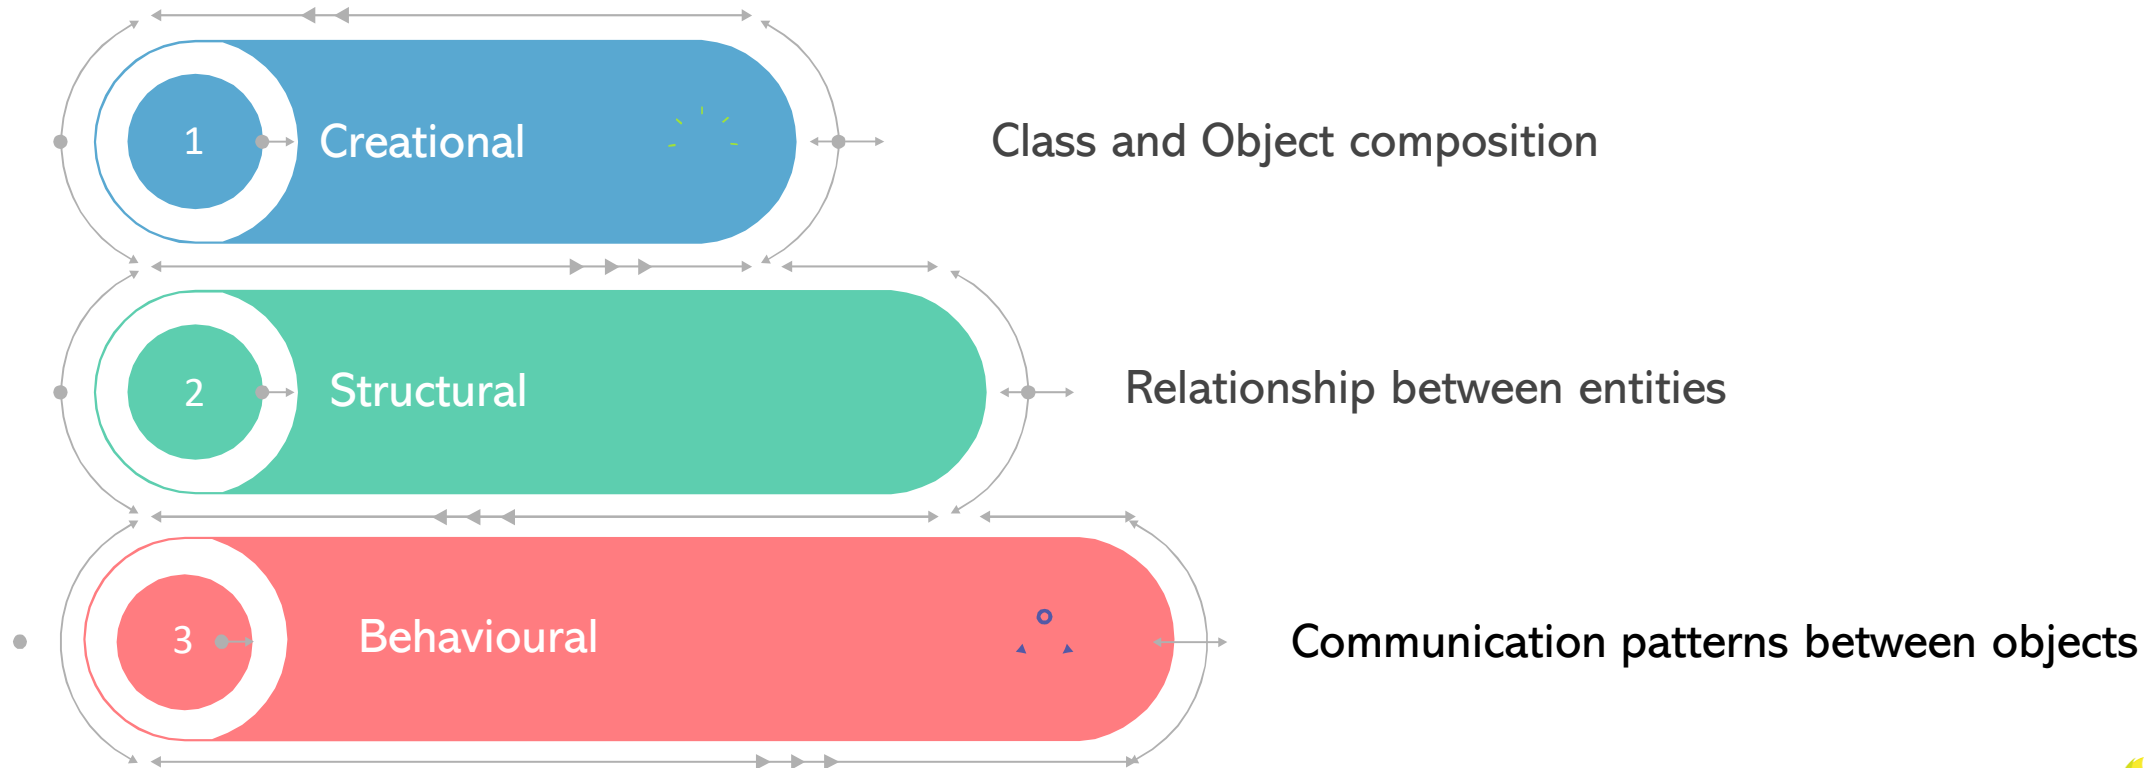

Design Patterns are many ...

Java Design Patterns

<https://java-design-patterns.com/patterns/>

Design Pattern Type

Should I use all of them?

A) Creational Patterns

- **Abstract Factory**

Creates an instance of several families of classes

- **Builder**

Separates object construction from its representation

- **Factory Method**

Creates an instance of several derived classes

- **Object Pool**

Avoid expensive acquisition and release of resources by recycling objects that are no longer in use

- **Prototype**

A fully initialized instance to be copied or cloned

- **Singleton**

A class of which only a single instance can exist

Factory Design Pattern / Object Pool

One of the scenario:

- You need to run against multiple browsers,
- Each browser with different capabilities,
- Like to reuse the object - create, reuse and dismiss WebDriver instances

<https://github.com/barancev/webdriver-factory>

B) Structural Patterns

- **Adapter**
Match interfaces of different classes
- **Bridge**
Separates an object's interface from its implementation
- **Composite**
A tree structure of simple and composite objects
- **Decorator**
Add responsibilities to objects dynamically
- **Facade**
A single class that represents an entire subsystem
- **Flyweight**
A fine-grained instance used for efficient sharing
- **Private Class Data**
Restricts accessor/mutator access
- **Proxy**
An object representing another object

Decorator Pattern

Add responsibilities to objects dynamically

Challenges and solutions:

- Timing related failures, for which we like to have more intelligent waits
- handles unhandled alerts,
- handles "stale" elements and attempts to find them again to perform the action on the "restored" element

<https://github.com/testleaf-software/devtools-selenium>

C) Behavioural Patterns

- **Chain of responsibility**

A way of passing a request between a chain of objects

- **Command**

Encapsulate a command request as an object

- **Interpreter**

A way to include language elements in a program

- **Iterator**

Sequentially access the elements of a collection

- **Mediator**

Defines simplified communication between classes

- **Memento**

Capture and restore an object's internal state

- **Null Object**

Designed to act as a default value of an object

- **Observer**

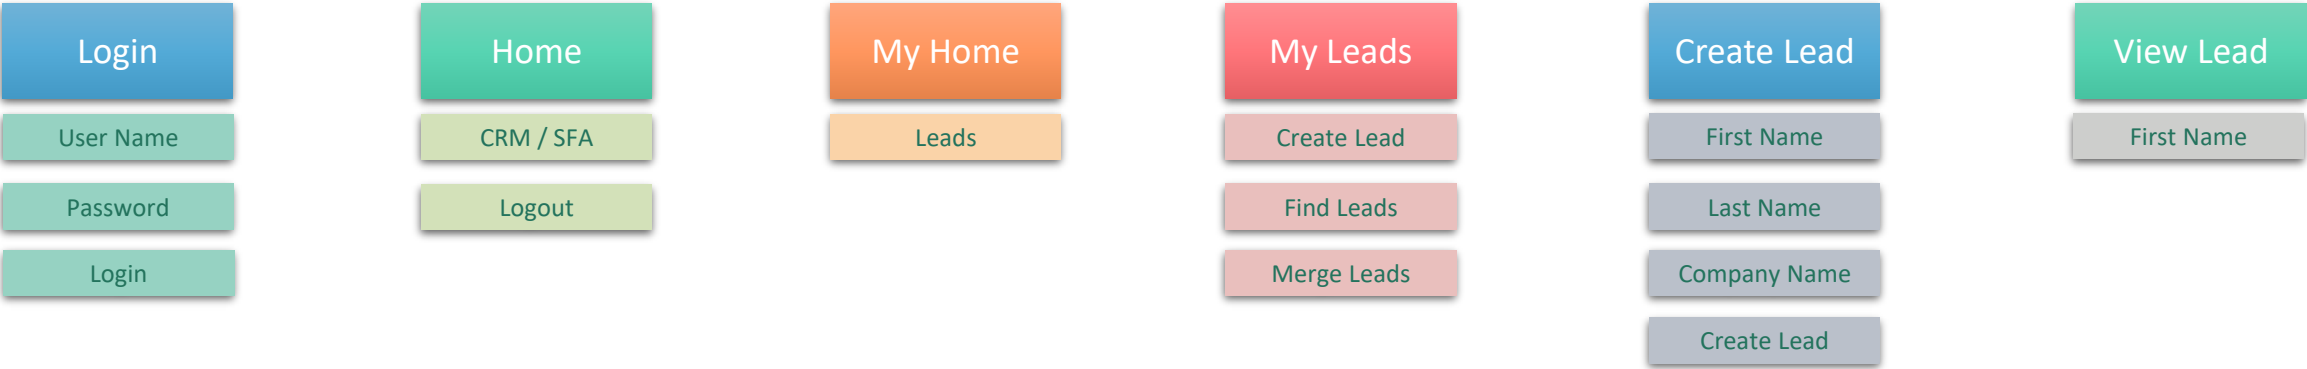

A way of notifying change to a number of classes

- **State**

Alter an object's behavior when its state changes

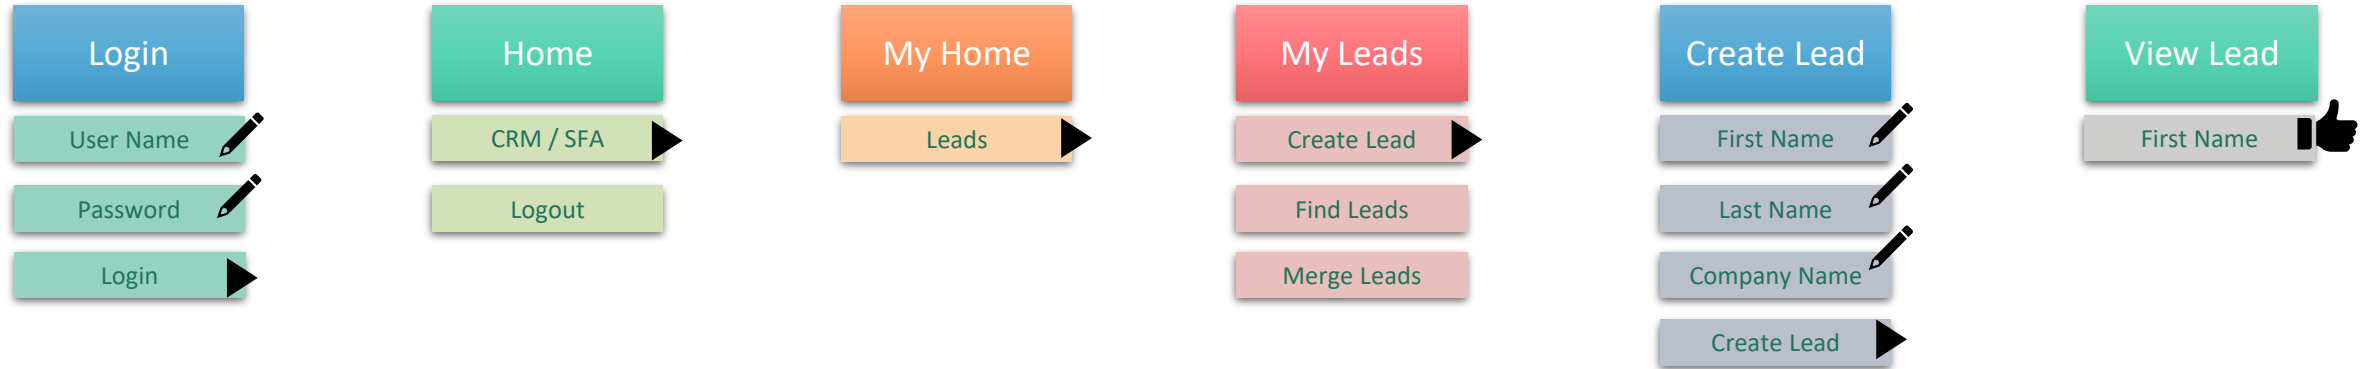

Page Object Design Patterns

Page & Patterns

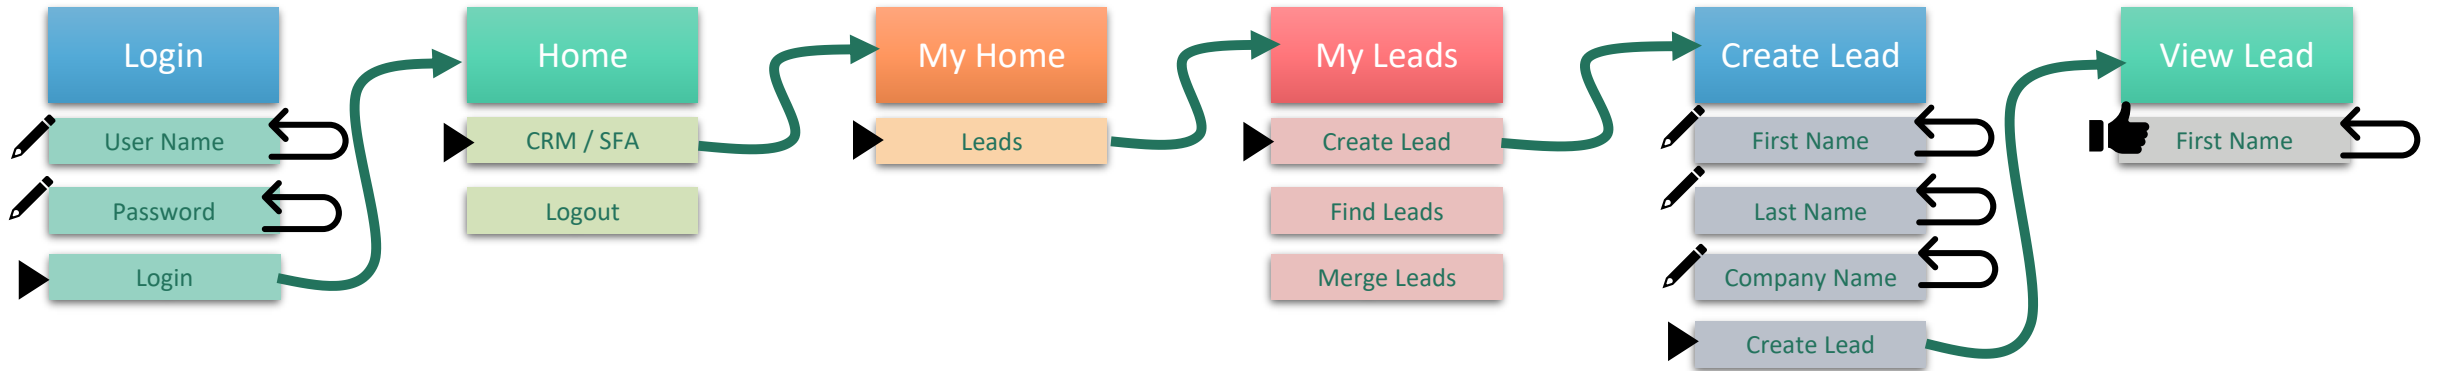

Page Object Design Patterns

Page & Patterns

Page Object Design Patterns

Page & Patterns

BDD Pattern

Using Cucumber, SpecFlow

Take Away 6

Use the appropriate design patterns **based on your influencer need.**

It is okay to choose multiple design pattern under one framework as long as it **does the needed** and does not conflict the solution

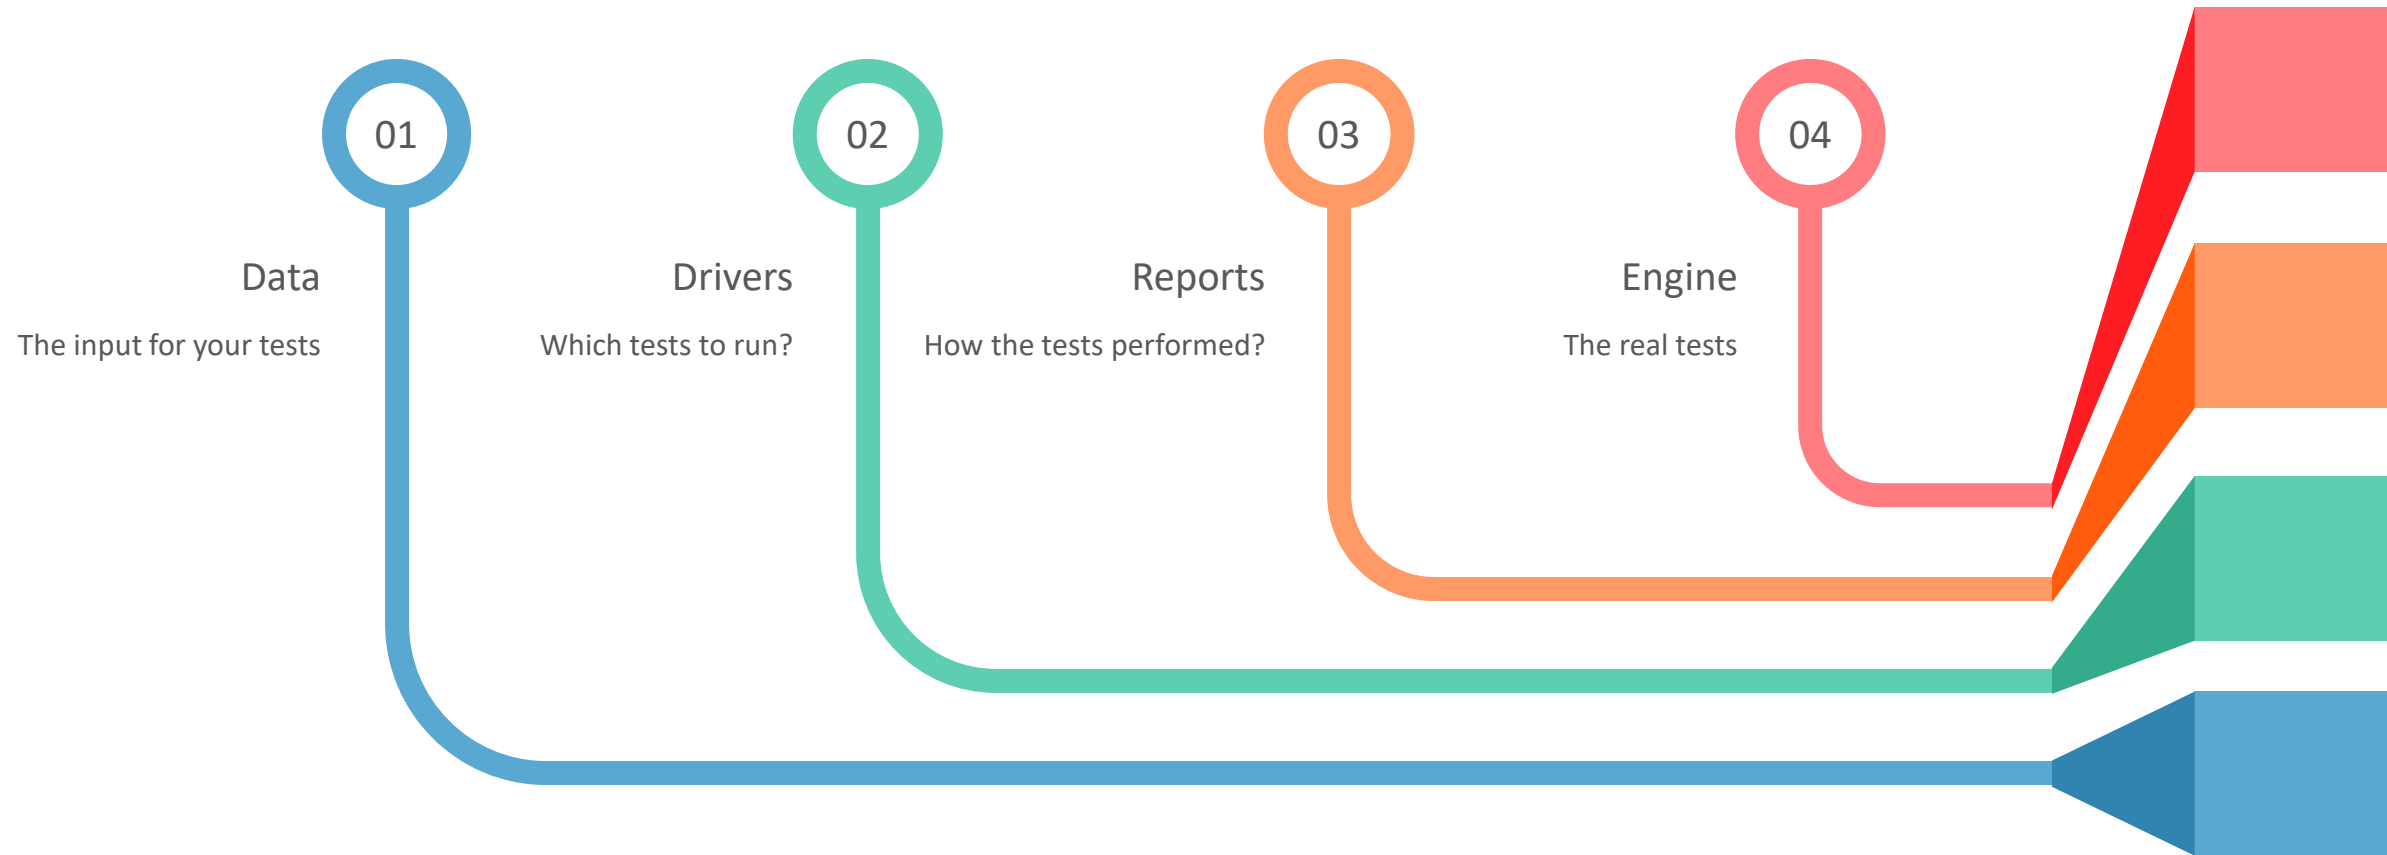

Step 3) Identify the Essential components

Common across all Cars

Essential Framework Components

Test Data Source – Build your own data engine

Take Away 7

Build your test data adaptor **based on your data source.**

Drivers – Depends on your language & tool

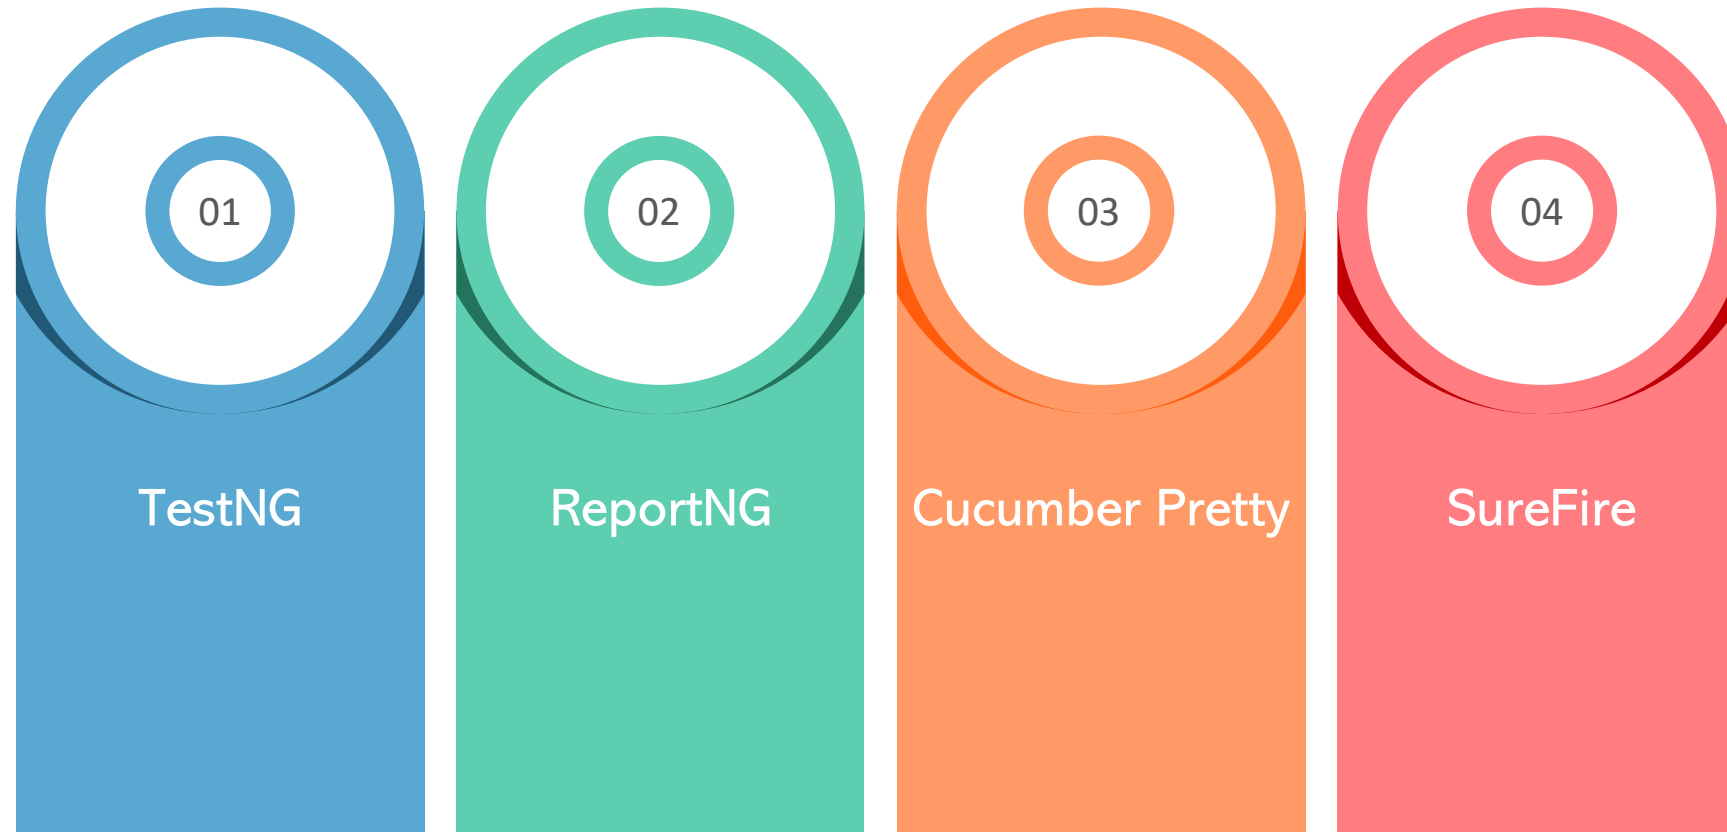

Take Away 8

Wrap your driver based on your language and tool.

Basic Reports through Listeners

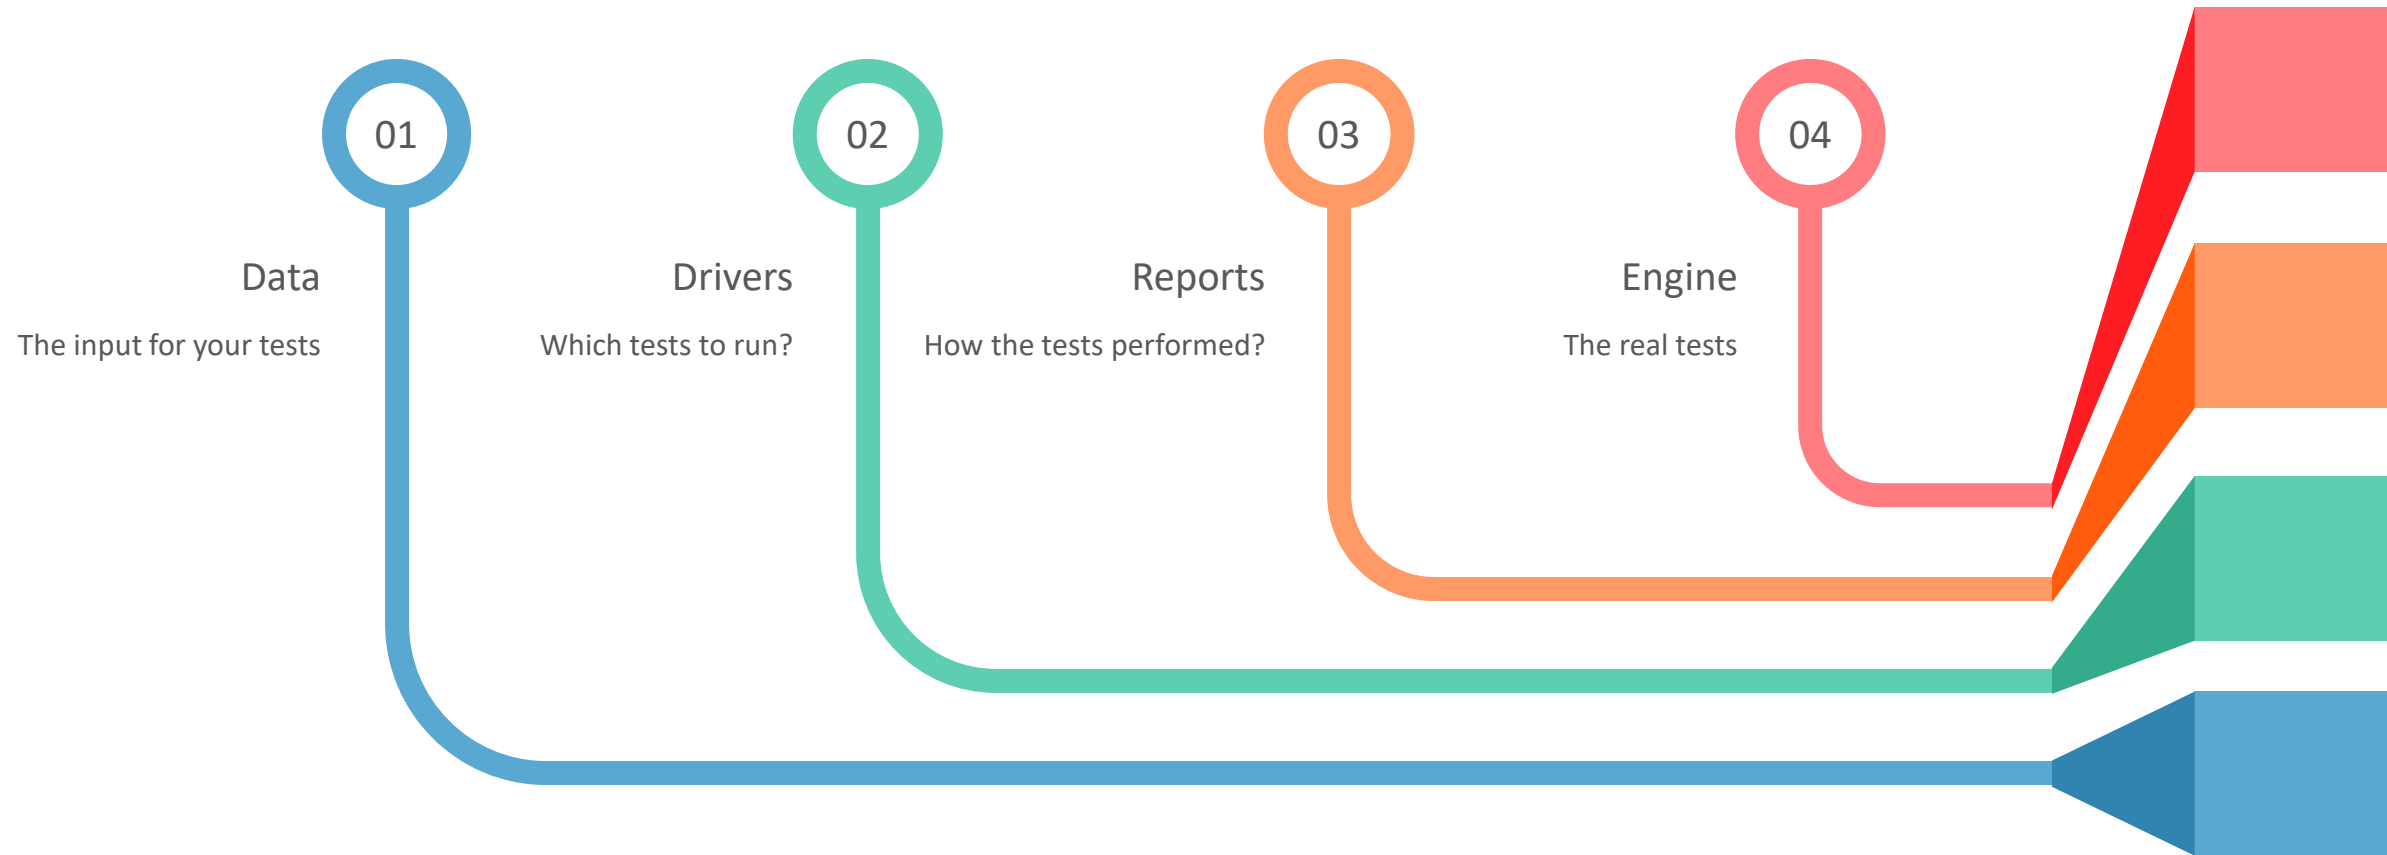

Powerful Dashboards (With Charts, Graphs and Snaps)

Take Away 9

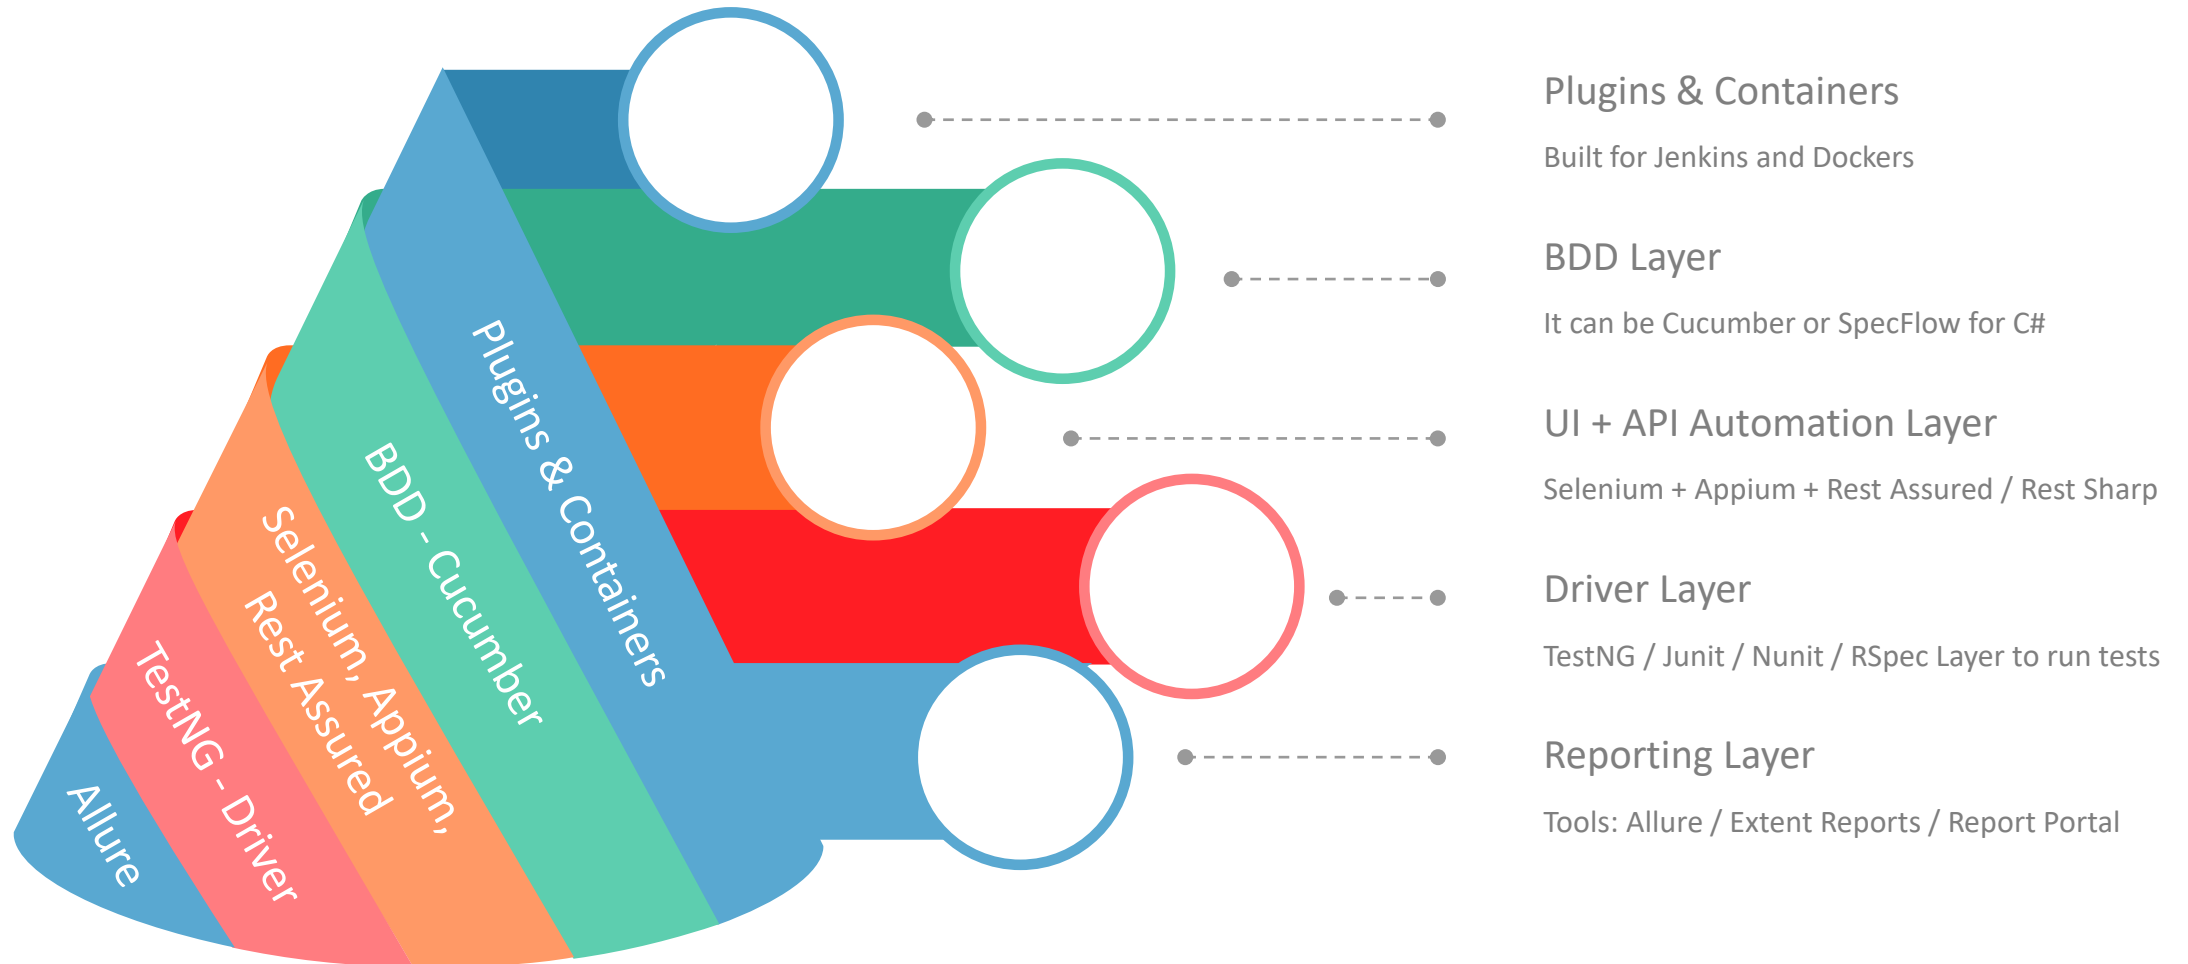

Integrate with your reporting engine based on your need, tool, language.

Engine – This is yours !!

FrameworkOne

Our Engine with Components

Step 4) Identify the Necessary components

Retry Logic

Retry the failed locator

Retry failed test / feature

Retry the failed data

Retry the failed test suite

Take Away 10

Building a powerful retry logic can save lot of time in debugging.

It is okay to retry for up to 2-3 with same or different scenario

Configuration

Environment

Objects

Language

Parallel

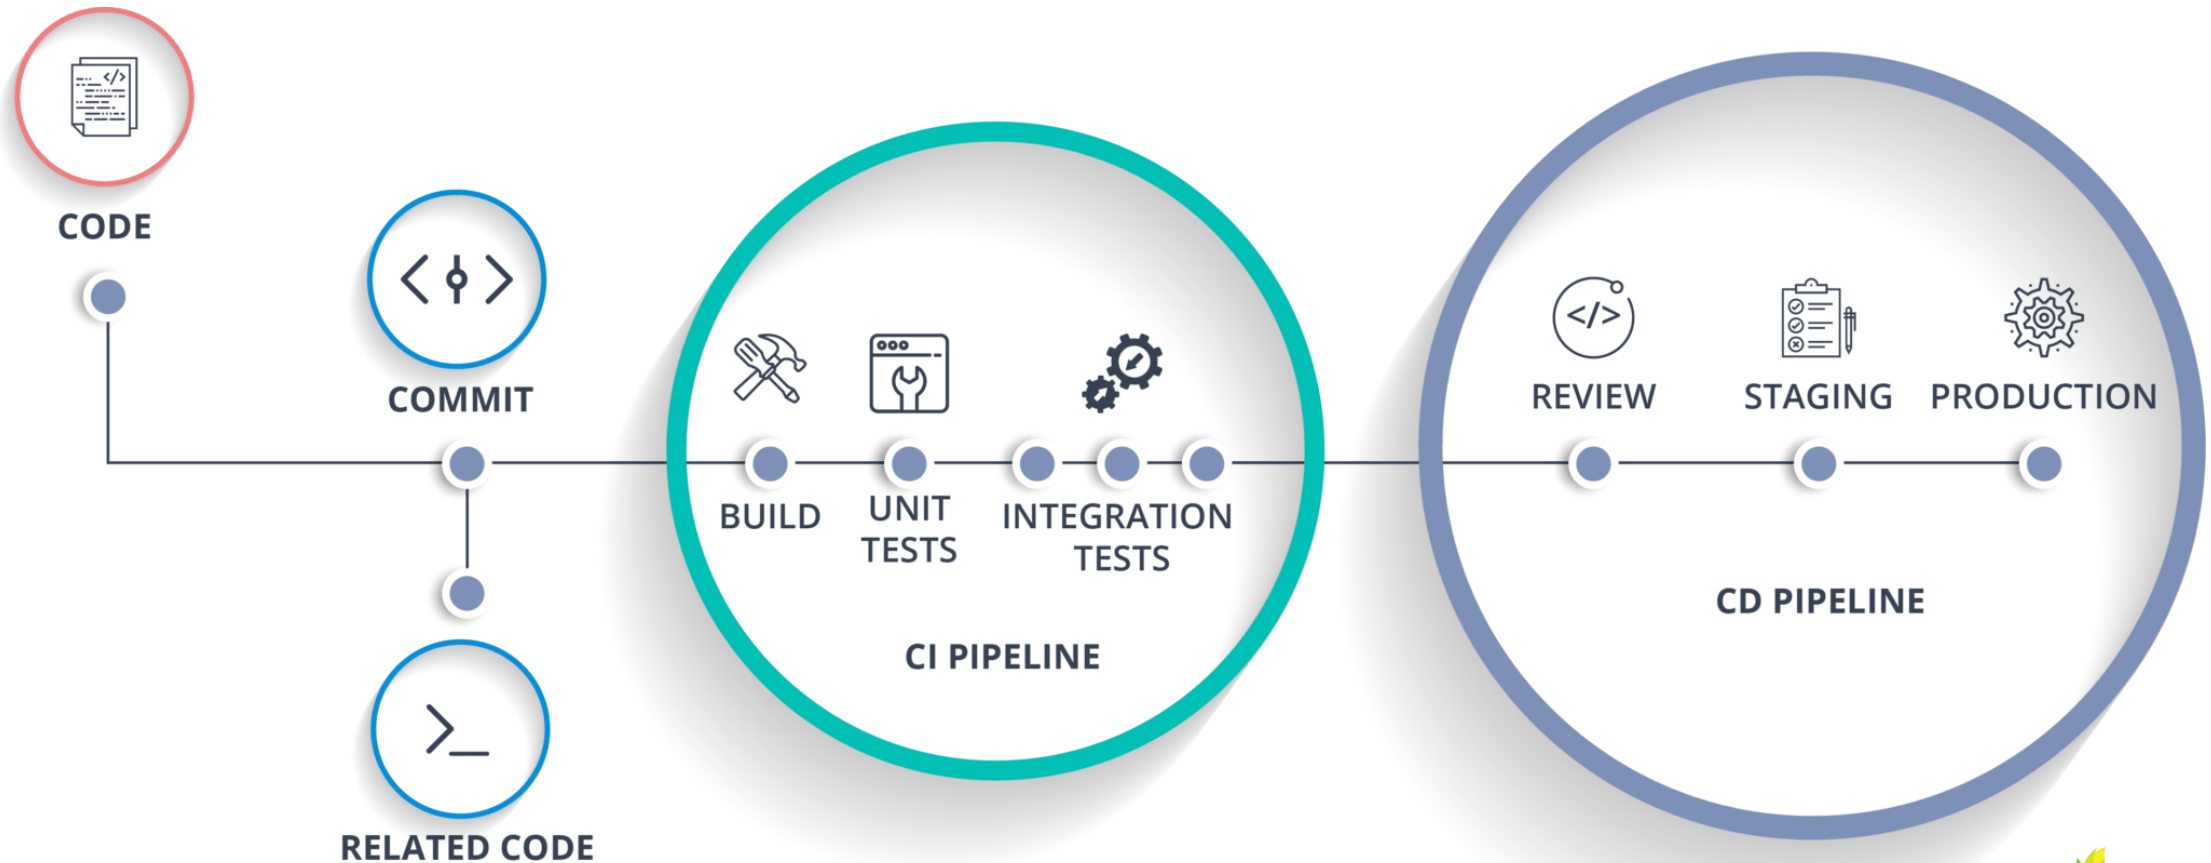

Take Away 1 1

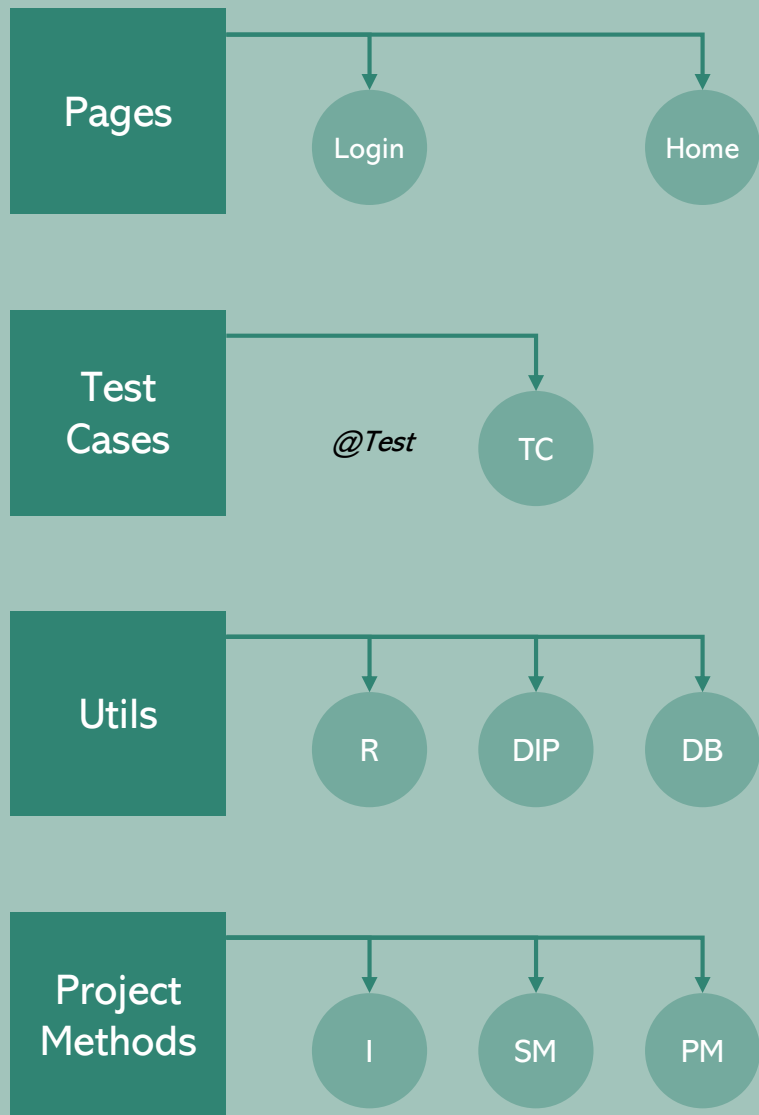

Building a powerful configurator can allow to adjust your tests for the need.

It is okay to have configurations in properties / XML / JSON (Flat file)

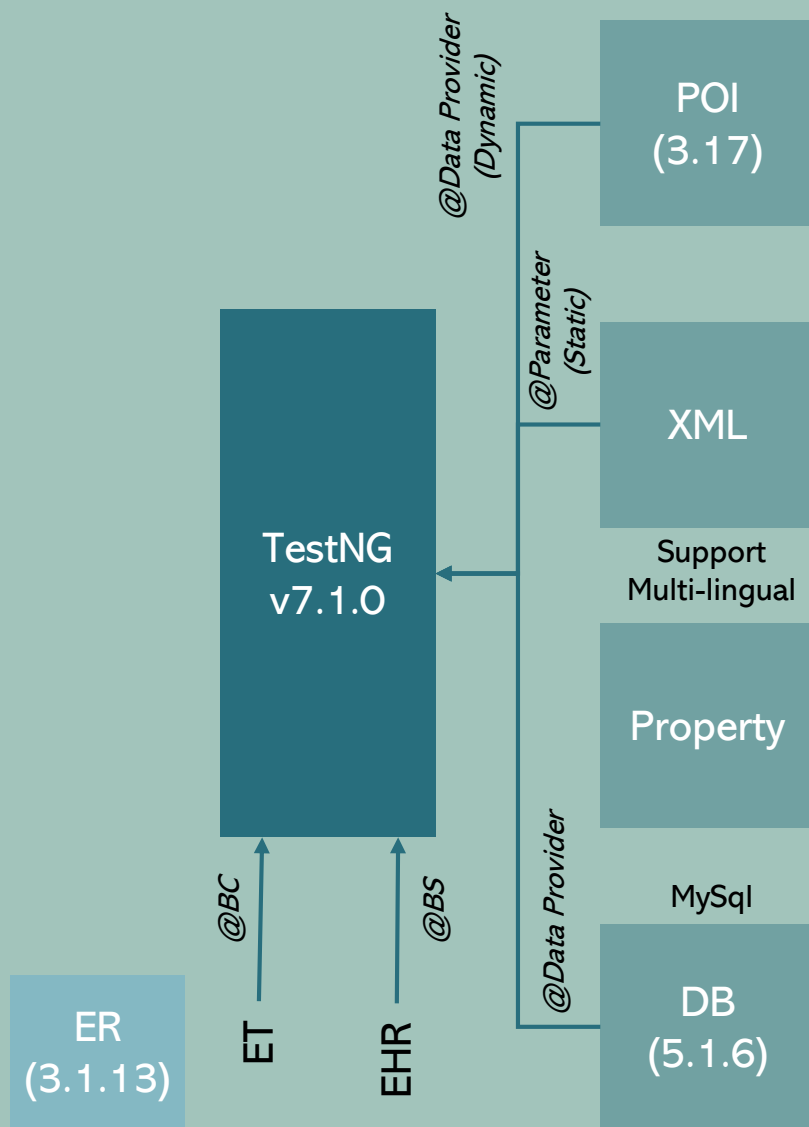

CI/CD/CT Integration

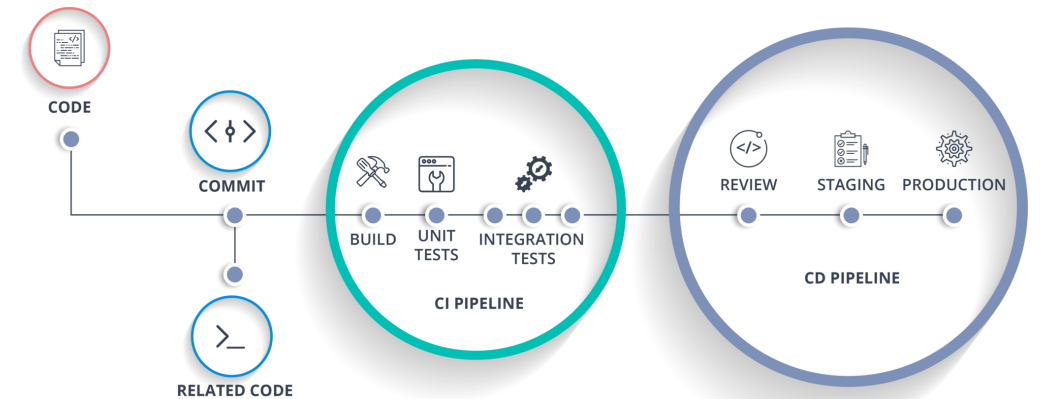

Selenium + TestNG + Cucumber

Take Away 12

Building a feature that **can allow integration with CI/CD/CT tool.**

- Like API to run your tests
- Command Line Option

Multi Lingual

Take Away 13

Building a feature that **can allow multi-lingual execution using:**

- Properties/JSON/DB to store objects
- Object Mapping with Language

Step 5) Identify the Premium components

Distributable & Scalable

Selenium Grid

Dockerized Grid

Jenkins Master - Slave

Zalenium

Machine Learning Algorithms

1

Defect Classification

4

Auto Fix (Sapienz)

2

Reinforcement Run Algorithms

3

Self Healing of Objects

Framework Accelerators

Locator Auto Identifiers

ChroPath, Ruto, Taiko

Code Generators

Automated code generators – Tuna, Elementer

Auto defect loggers

Using API, Plugins and through ML Models

Data & Document Generators

Tools like Yard

Additional Takeaways for you.

- Build your own annotations
- Use Lombok Project
- Use Documentation tool like Yard
